SUMMARY

Artificial Intelligence and Data Science undergraduate with a strong academic foundation and hands-on experience in developing intelligent, data-driven solutions. Combines core engineering knowledge with practical problem-solving to build scalable systems and address real-world challenges. Passionate about research, algorithm design, and continuous learning in intelligent technologies.

EDUCATION

Bachelor of Technology (B.Tech) in Artificial Intelligence and Data Science	2024 - 2027
KL University, Vijayawada. CGPA : 9.5/10	
Diploma in Electrical and Electronics Engineering	2021 - 2024
A.A.N.M V.V.R.S.R Polytechnic, Gudlavalleru. 95%	
Class X	2020 - 2021
Z P High School, Marlapalem. CGPA : 9.3/10	

TECHNICAL SKILLS

Programming Languages	Python, C
Web Technologies	JavaScript, React.js
Database	MongoDB, MySQL
AI & Machine Learning	Machine Learning, Deep Learning, NLP, Gen AI, Large Language Models (LLMs)
Frameworks & Tools	TensorFlow, PyTorch, Git, GitHub, VS Code, Postman
Core Concepts	Data Structures and Algorithms (DSA), Operating Systems

PROJECTS

Invoice Fraud Detection System	2025
• Parsed and validated critical invoice fields to detect inconsistencies and anomalies, ensuring accurate financial record validation. • Built and optimized a feedforward neural network in TensorFlow/Keras, applying early stopping to achieve 98% validation accuracy. • Designed a multi-tier risk classification system to automatically triage invoices by fraud severity, streamlining decision-making. system resilience with end-to-end input validation and fault-tolerant error handling for consistent performance. • Improved detection precision through iterative model tuning, significantly reducing false positives and boosting pipeline performance.	
AI War Simulation using Minimax and Alpha-Beta Pruning	2024
• Engineered a turn-based war simulation environment with dual AI agents, leveraging game-theory principles to drive intelligent decision-making. • Architected a Minimax-based decision engine supporting multi-step lookahead, enabling agents to evaluate and select strategically optimal moves across dynamic game states. • Accelerated AI computational efficiency by 50% by integrating Alpha-Beta pruning, systematically eliminating irrelevant branches and reducing redundant state evaluations. • Deployed the entire simulation in Python, demonstrating applied expertise in search algorithms and state-space exploration across 100+ possible action sequences.	

CERTIFICATIONS

Oracle Cloud Infrastructure 2025 Certified Architect Associate	Verify Credential
Automation Anywhere Certified Essentials RPA Professional (Automation 360)	Verify Credential
